WELCOME TO THE ECOSYSTEM

\$FTH is the first Multi-Chain Reward Ecosystem with Swap 2.0 Technology, the revolutionary Swap technology that creates authentic and sustainable trading markets for token projects. \$FTH's proprietary tech allows projects to collect taxes in the paired asset rather than project tokens. This first-to-market technology has never been seen on the blockchain before.

What is \$FTH?

\$FTH is an independent, scale platform with a range of protocols, Ensuring honesty and reliability data storage protected, by a reliable distribute registry, \$FTH platform has a number of innovative ideas and is developed to meet the requirements of the current cryptocurrency space and the future of blockchain industry.

\$FTH is a service that allows you to quickly and easily earn money-like crypto assets (such as WBNB & Native Tokens), rewards and cashback. You can earn rewards by completing simple tasks like watching videos or playing games, doing your online shopping or browsing the web. It's free and easy! You can earn rewards for the things you already do such as:

- Viewing Adverts
- Viewing small videos
- Playing games
- Downloading apps
- Taking surveys and more...

FEATURES

Transparency :

Our supporters and our users are our most valuable. We are open to any ideas and concepts to add on our Roadmap. We have everyone to have a voice and feel like part of the team. We will add the best ideas by voting system for the community

Community Focused:

We are 100% Community obsessed! We strive to build a best-in-class community with active members who are part of the evolution of \$FTH. Join our movement and help donate to charities in communities worldwide! Together we can help and make sure everyone has access to the resources

Growth-Driven

\$FTH was created with growth in mind along with a focus on long term sustainability. The project plans to develop the best in class platforms on the \$FTH eco-system providing many future catalysts for holders to look forward to. \$FTH will become the and the community will vote. leading standard of cryptocurrency in communities worldwide

AUTO BOOST

Auto Buyback & Burn

Buyback & Burns allow for true mitigation of possible offsets later in the development of the project. This really benefits the holders of \$FTH token and allows the project to process burns as we achieve initiatives on our roadmap. All buyback & burns are transparent and are available for all to see and we will announce our strategy as we continue to develop at each phase of the project

Auto Liquidity Pool (LP)

Buyback & Burns allow for true mitigation of possible offsets later in the development of the project. This really benefits the holders of \$FTH token and allows the project to process burns as we achieve initiatives on our roadmap. All buyback & burns are transparent and are available for all to see and we will announce our strategy as we continue to develop at each phase of the project

Static Rewards

Static Rewards allow the ability for all holders of \$FTH token to participate on the upside of earning while they allow the project to develop and reach its potential. Each holder is rewarded based on their percentage of tokens held and proportionate to the transactions executed.

\$FTH Token Deflationary Mechanics

Manual Burn:

Manual Burn allows for proactive, strategic mitigation of possible costs to the project as it develops. As we achieve initiatives on our roadmap, the project will be able to process burns, and holders will be the benefactors as they will see their percentage of \$\$FTH go up automatically. All burns are transparent and are available for all to see, and we will announce our strategy as we continue to develop at each phase of \$\$FTH.

\$FTHSwap is the first swap utilizing WBNB and ETH to power BuyBack functionality. \$FTHSwap's exchange offers users and developers a best-in-class experience using our revolutionary Swap 2.0 technology. Swap 2.0 technology allows our users and projects to swap with the base coin instead of the project token when collecting tokenomics. Every project that launches on \$FTHSwap will utilize Swap 2.0 and advance its chance of success. \$FTHSwap lets users trade without the need to go through a Centralized Exchange. Everything you do on \$FTHSwap is routed directly through your wallet. You can be the custodian of your own tokens.

Liquidity Pools

You can only swap tokens on \$FTHSwap if there is enough liquidity for those tokens. If nobody has added much liquidity for the token or tokens you want to swap, it will be difficult, expensive, or impossible to do so.

Providing liquidity will get you Liquidity Provider Tokens, which will earn you rewards in the form of trading fees to ensure there's always liquidity for the exchange.

A user can choose to provide liquidity to an existing pool (or create a new one) for a pair of tokens. Each pool has two tokens - held in quantities representing an equal value of each token.

When a user provides liquidity, the exchange will give them an LP token for the tokens entered into the pool. This LP token represents the user's share of the pool's value and can be exchanged later for a percentage of the tokens held in that pool when liquidity is withdrawn.

Users earn fees for providing liquidity, which is automatically added to the LP token's value and will be released to the liquidity provider on withdrawal.

FARMS

Farms exist to incentivize liquidity providers and compensate them for the risk of impermanent loss. The rewards may be paid out in one of the provided tokens or in another.

Farming allows users providing liquidity to earn \$FTH token rewards by locking their LP tokens into a smart contract. The incentive is to balance out the risk of impermanent loss that comes along with locking in your liquidity.

To gain LP Tokens, you must pair two tokens and stake them in the Farm to win rewards. This pairing allows you to earn \$FTH while maintaining your other token positions!

Earning Rewards

With \$FTHSwap, you can earn rewards in both Pools and Farms

Features and Concepts

APR

APR stands for Annual Percentage Rate and is the amount by which your principal would grow if you kept it invested for one year without any compounding.

APRs in Pools and Farms are variable rates that constantly change based on the total amount of tokens staked to the pool and the relative values of both your staked token and the reward token.

COMPOUNDING

Compounding refers to reinvesting your rewards, increasing the number of tokens you have staked continually, and, therefore, the value of the reward received. This continuous increase can have a dramatic effect on your annual yields.

Rewards are tokens paid to investors after each block. These rewards are similar to the interest received on conventional savings. The amount of reward you will receive is determined by the APR at the time of each reward distribution and based on the value of your staked principal.

Earning Rewards In The Pool

One of the numerous ways Defi allows users to earn rewards is by staking tokens for rewards. When a user "stakes" a token, the token is transferred from the user's wallet to the protocol's smart contract, which the user is staking.

The protocol delivers rewards in the form of extra tokens, either of the same kind as the staked token or a different token, in exchange for this temporary money commitment.

\$FTHSwap offers several Pools to earn extra \$FTH, WWBNB\$FTH, or USDT\$FTH by staking the tokens you've purchased, converted, or acquired

A Few Things to Remember:

- You may stake an unlimited number of tokens.
- All Pools have a 5-day lock period which resets if additional tokens are staked.
- Once unlocked, you can withdraw any or all of your staked tokens whenever you like.
- You may harvest your rewards at your convenience.

Staking is similar to putting your money in a bank savings account, only with much higher returns.

When you stake cryptocurrency, you are depositing your tokens into one of the DEX's smart contracts, and in exchange, you receive reward tokens at a variable interest rate.

Once earned, you can harvest your rewards, which will then appear in your wallet. You may add or remove your staked tokens from the smart contract anytime after the 5-day lock period.

Liquidity Provider Token

For instance, if you deposit \$FTH and WBNB into a Liquidity Pool, you'll receive \$FTH-WBNB LP Tokens. Your portion of the \$FTH-WBNB Liquidity Pool is represented by the number of LP Tokens you receive.

When \$FTH Swap users utilize your liquidity pool, Liquidity Providers are rewarded through trading fees. When trading on "FTH" Swap, traders pay a 0.3% fee:

You can withdraw your liquidity at any moment to redeem your funds

NOTE: While providing liquidity in a smart contract, your tokens will no longer appear in your wallet but will be visible by connecting your wallet to the DEX. If available, the user may be able to farm their liquidity tokens in Farms to earn additional rewards. While providing liquidity, tokens are exposed to a risk known as impermanent loss or divergent loss

What blockchains does \$FTH have access to?

\$FTH is built BNB Smart Chain in its universe and currently supports BEP20 and Ethereum pools. It will feature blockchains such as Cardano, Solana, Polygon, Avalanche, CELO, and TRON.

Additional blockchains will be added to the platform as smart contracts are introduced to other blockchain projects.

\$FTH will strive to become the universal platform for all of the crypto sphere.

\$FTH Token

\$FTH is a decentralized launchpad building a trustworthy cryptocurrency market surrounded by an ecosystem of unique tools to enhance project development and community growth worldwide.

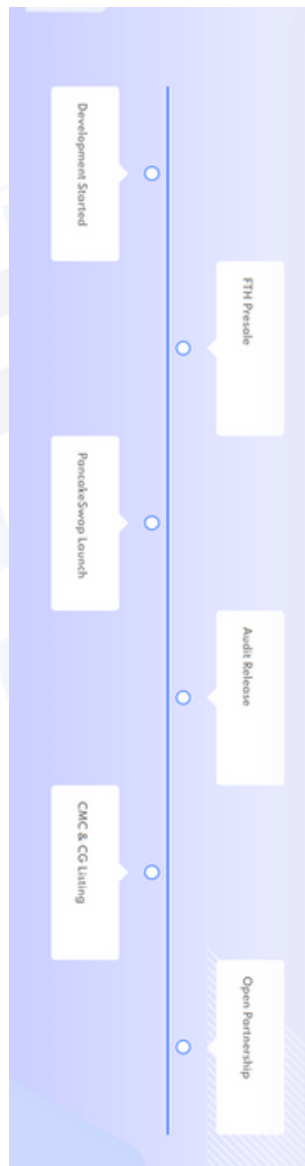

Users, developers, and projects can launch their tokens and create token presales without needing code knowledge.

Our launchpad provides a transparent platform for investors by solving two major issues in the DeFi space: marketing and investor sentiment

- \$FTH is founded by a network of best-in-class marketing partners, verified influencers, and communities to help projects reach their full potential.
- Certified Launch Projects undergo a rigorous vetting process, thus ensuring only the best projects launch into the Swap 2.0 Ecosystem.

\$FTH is a part of the \$FTH Ecosystem and uses our native token, \$FTH, as a utility token. Investors in \$FTH can join the and participate in token presales. Not only does \$FTH establish a safer product for investors, but it also allows them to gain early access to vetted token presales before they hit the public.

ROADMAP

DISTRIBUTION

Pre Sale - 1,000,000

Locked Tokens - 250,000

Private Sale - 100,000

Partner Distribution - 100,000

TAX FEE

Staking Rewards (buy fee) - 1%

Staking Rewards (sell fee) - 2%

Liquidity Pool (sell fee) - 2%

About

Founded in 2022 by leading academics in the field of Computer Science, FusionTech is going to be a leading blockchain security company that serves to verify the security and correctness of smart contracts KYC and blockchain-based protocols. Through the utilization of our world-class technical expertise, alongside our proprietary, innovative tech, we're able to support the success of our clients with best-in-class security, all whilst realizing our overarching vision; provable trust for all throughout all facets of blockchain.
